

Known Input

price = 1000
discount = 20

finalPrice = 800

Execute my function

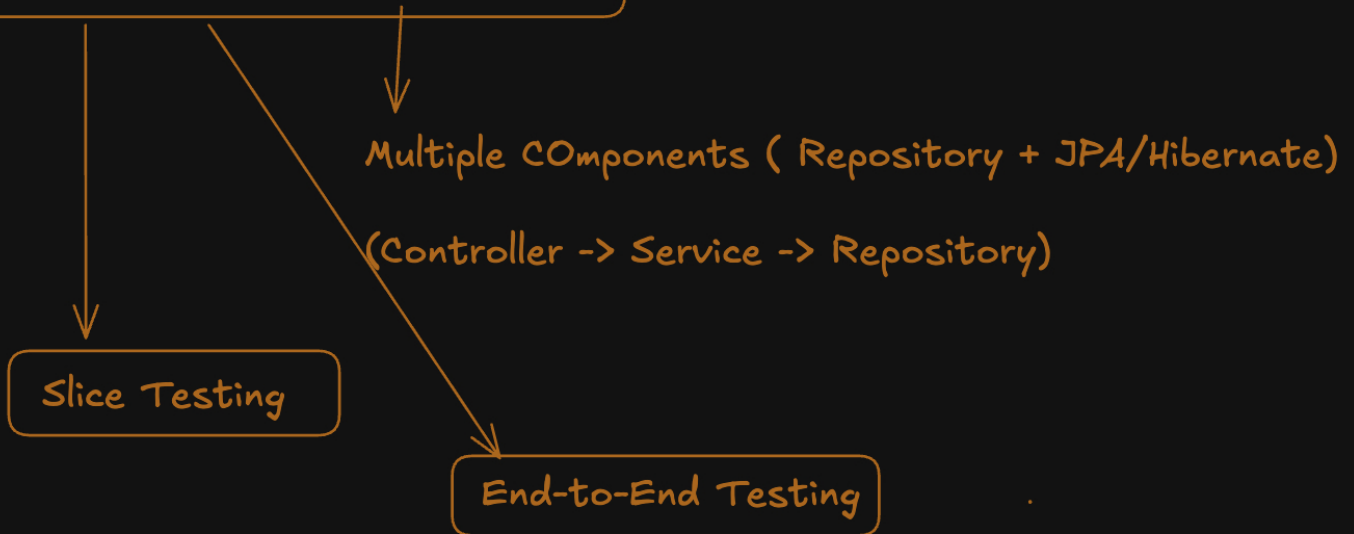

Actual Output

Actual Output -> ExpectedResult

Test Case ??

Initial Condition	→	Arrange
Action	→	Act
Expected Result	→	Assertion

Unit testing vs Integration Testing

Unit Test

Business Logic
Conditional Branch
Validation Rules
Exceptions Test
Security check
...

What not to test ?

Library code/ framework code
plain getters/setters
JPA methods
...

Mockito

Test Double

Dummy Object

Stub -----> findById(1). ---->

Fake --> Maps / H2 DB

Mock

Returned pre-defined values
Db (H2 / Maps)

```
{  
  name : laptop  
  stock : 10  
  price : 50,000  
}
```
